

ABSTRACT OF THE DISCLOSURE

A main body unit includes a wire cabling circuit body which is formed by bending rigid wires into predetermined cabling pattern shapes, a
5 base member allowing the wire cabling circuit body to be disposed on an upper surface thereof and allowing electronic components such as a read-only memory to be mounted thereon, and a cover which is fixed to the base member in a manner that covers the wire cabling circuit body disposed on the base member. The main body unit is disposed inside a
10 transmission case.
